### SKILLS

#### Frontend

- Next.js, React, TypeScript
- Redux Toolkit, Apollo Client
- Material UI, Tailwind CSS, Vite
- SCSS

#### Backend

- NestJS, Express.js, GraphQL
- REST APIs, WebSocket
- MongoDB, Mongoose
- JWT, OAuth, 2FA

#### AI & Machine Learning

- Gemini API, RAG
- Prompt Engineering
- Computer Vision (OpenCV)
- Image Classification, Transfer Learning
- PyTorch, MobileNetV2
- Model Evaluation & Optimization
- NumPy, Pandas

#### DevOps & Deployment

- Docker, Docker Compose
- NGINX, Ubuntu Linux
- PM2, VPS Deployment

#### Tools & Others

- Git, GitHub
- Postman, Figma
- VS Code, Cursor

### EDUCATION

**Inje University — South Korea**  
Masters Degree  
Expected Graduation: 2026

### LANGUAGES

|         |               |
|---------|---------------|
| Uzbek   | Native        |
| English | C1 (Advanced) |
| Russian | C1 (Advanced) |
| Korean  | C1 (Advanced) |

### ADDITIONAL INFORMATION

Seoul / Busan, South Korea

Visa D-10

### SUMMARY

Software Engineer specializing in Full-Stack development and practical AI integration. Experienced in building production-ready applications end-to-end, from architecture and UI to APIs, databases, AI services, and deployment. Skilled in Next.js, React, TypeScript, NestJS, GraphQL, MongoDB, Docker, NGINX, and Ubuntu VPS.

Built real-world multi-role platforms, e-commerce systems, and AI-powered applications involving booking workflows, real-time communication, authentication, admin operations, and production deployment. Experienced with PyTorch, FastAPI, MobileNetV2, computer vision, and image classification for practical AI solutions.

Focused on building reliable, scalable software where Full-Stack engineering and AI work together to turn ideas into complete, production-ready products.

### EXPERIENCES

#### ITC Global - Full-Stack Developer | June 2023 – December 2024

**Next.js • NestJS • GraphQL • MongoDB • Gemini • Docker**

- Developed and maintained full-stack web applications using React, Next.js, TypeScript, Node.js, NestJS, and MongoDB, focusing on scalable architecture and reliable application performance.
- Designed and integrated REST and GraphQL APIs, authentication, database operations, and frontend-backend communication.
- Developed GadgetStore, a full-stack e-commerce platform with product catalog, cart/checkout, authentication, customer profiles, order management, and admin functionality.
- Implemented secure authentication and authorization using JWT, with database management through MongoDB and Mongoose.
- Deployed production applications on Linux VPS using PM2, NGINX, and deployment scripts, managing application processes and server configuration.

#### NGroup - Full-Stack & AI Developer | January 2025 – July 2026

**Python • PyTorch • OpenCV • FastAPI • Docker • Ubuntu VPS • NGINX**

- Developed and integrated full-stack and AI-powered applications using Next.js, NestJS, TypeScript, Python, FastAPI, PyTorch, and MongoDB.
- Fixora — Built an AI-powered Apple repair marketplace with technician booking, real-time chat, authentication, reviews, notifications, and AI-based issue classification.
- Carvia — Built a computer vision application for vehicle brand and model recognition using PyTorch and FastAPI, with an image-based prediction workflow.
- FoodAI — Developed a deep-learning image classification system for recognizing food categories using PyTorch and a pretrained MobileNetV2 model.
- Worked with Docker, NGINX, Ubuntu Linux, and VPS deployment, integrating AI services with web applications and managing production-ready environments.
